Game Status

This section of the report is about the final outcome of your game, and how it compares with that of others.

Partial Success

This is one of 629 games so far with Partial
Success status

Other Games

- 239 Complete Success
- 628 Partial Success
- 71 Survived
- 14 Unsuccessful

Summary

Cymorg simulations have 4 possible outcomes. "Unsuccessful" games are those that players were unable to complete. A status of "Survived" means that you completed the exercise, but didn't achieve any of your goals or KPIs. A game is called "Partial Success" when one or more KPIs have been achieved, but at least one of them has not been met. "Complete Success" implies that all goals and KPIs have been met.

Targets & Achievements

This section is all about how you performed in the game, with respect to the targets and KPIs that were set for you. When viewing this report online, use the arrows on either side to scroll through the individual targets. For each target, you will find your final performance on the left. The target is depicted on the dial, while your performance is depicted by the pointer. To its right you will see how your score progressed after every move, along with a group comparison in blue.

Stakeholder Engagement Score

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is higher than that in 46% of 953 games completed so far.

Adaptability and Resilience Rating

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

In this game, you significantly outperformed your peer group in this KPI. Remember that this statistic is a dynamic one: as more and more people play the simulation, the group averages get recalculated. You may want to regenerate this report later to see if you maintain your lead over the average. Better still, play again in some time, and try and better your own score.

Your score in this game is in the top 9% of 953 games completed so far.

Peer Collaboration Effectiveness Score

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

In this game, you significantly outperformed your peer group in this KPI. Remember that this statistic is a dynamic one: as more and more people play the simulation, the group averages get recalculated. You may want to regenerate this report later to see if you maintain your lead over the average. Better still, play again in some time, and try and better your own score.

Your score in this game is in the top 1% of 953 games completed so far.

Learning Engagement and Initiative Index

Summary

You were unable to achieve the target, in this game. Take heart: Cymorg simulations are carefully calibrated to make it tricky for participants to achieve some KPI's. Just like in real life, sometimes it simply isn't possible to achieve every one of your KPIs. The important thing is to ensure that you respond to every task to the best of your ability, and to learn by observing how data changes. Over time, you will learn how to hit every target.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is higher than that in 42% of 953 games completed so far.

This section of the report discusses the behavioral competencies that are fundamental to your success in the role. When viewing this section online, please use the arrows at either end to scroll through the competencies. For each competency, the donut depicts the actions you took relevant to that competency, divided into "Most Appropriate", "Intermediate" and "Least Appropriate". Click on "View Details" to see a detailed breakdown of each of your actions.

The ability to fully concentrate, understand, and respond thoughtfully to what others are saying, demonstrating attentiveness and respect during communication. 2.

Group score 0  10

4
Total responses

Your performance indicates exceptional mastery in fully concentrating, comprehending, and responding thoughtfully across diverse communication contexts. This level reflects consistent attentiveness and respect in all stakeholder interactions. To leverage this strength, focus on applying advanced listening skills to navigate complex, multi-stakeholder discussions where competing perspectives emerge. Practice facilitating conversations where you help others feel genuinely heard while synthesizing diverse technical inputs. Share your listening strategies with ILP peers to elevate team communication standards. Consider how your attentiveness can help identify unspoken challenges within your cohort or project teams.

- Your score in this game is in the top 1% of 953 games completed so far.

Adaptability

The ability to remain calm and composed in unexpected situations, adjust strategies when faced with new challenges, and demonstrate flexibility in approach and decision-making.

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

8
Total responses

Summary

Your exceptional score reflects mastery in adaptability, showing remarkable composure under pressure and sophisticated flexibility in decision-making across varied circumstances. At this level, you demonstrate advanced capability in not only adjusting to change but thriving within it. Channel this strength by serving as a change champion during organizational transitions, helping design learning experiences that build adaptability in others, and taking on complex projects with high uncertainty. Consider exploring how you can help shape more agile processes within your team and contribute to building adaptive capacity across the broader organization.

- Your score in this game is in the top 26% of 953 games completed so far.

Emotional Regulation

Maintaining composure and professionalism under pressure by controlling emotional reactions, responding calmly, and keeping discussions constructive.

Your score 0  8.85 10

Group score 0  7.20 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

6
Total responses

Summary

Your performance indicates exceptional mastery in emotional regulation, demonstrating exemplary composure and professionalism even in the most demanding circumstances. At this level, you likely serve as a stabilizing influence during high-pressure situations within your cohort. Continue developing by exploring advanced applications such as proactively creating emotionally supportive environments for team members during critical project phases. Consider studying organizational psychology principles to deepen understanding of systemic stress factors. Channel your expertise toward developing frameworks or peer support initiatives that help other ILP trainees build emotional resilience, positioning yourself as a thought leader in professional emotional intelligence.

- Your score in this game is in the top 14% of 953 games completed so far.

Emotional Understanding & Relationship Management

Recognizing emotional cues and team dynamics, responding appropriately to maintain harmony and trust. Relationship Management: Building trust and maintaining healthy professional relationships through collaboration and conflict avoidance.

Your score 0  9 10

Group score 0  7.71 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

4
Total responses

Summary

Your performance demonstrates exceptional mastery in understanding emotional undercurrents and cultivating meaningful professional relationships across diverse stakeholder groups. At this level, you consistently maintain trust and harmony even in complex or high-pressure situations. Advanced applications: Position yourself as a relationship ambassador by helping design inclusive team-building initiatives for your ILP cohort. Develop expertise in stakeholder management by taking on projects requiring coordination across multiple functions. Share your approaches through informal mentoring or creating resource materials that help fellow associates strengthen their interpersonal effectiveness.

- Your score in this game is in the top 19% of 953 games completed so far.

Inclusiveness

Ensuring equal participation and respect for all team members by actively inviting contributions, using inclusive language, and preventing dominance or exclusion.

Your score 0  10

Group score 0  10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

■ Most Appropriate

2
Total responses

Summary

Your performance demonstrates exceptional mastery in fostering inclusive, equitable team environments. At this level, you consistently ensure all voices are heard and valued while navigating complex group dynamics with sophistication. Advanced development: Champion inclusiveness initiatives within your ILP cohort or broader organizational context. Share your approaches through informal coaching or knowledge-sharing sessions. Explore research on inclusive leadership and organizational culture to deepen theoretical understanding. Consider how you can influence team norms and practices to embed inclusiveness systematically across projects and learning experiences.

- Your score in this game is in the top 1% of 953 games completed so far.

Mindfulness & Motivation

Staying fully present and attentive during discussions, avoiding distractions and demonstrating active listening. Motivation - displaying enthusiasm and positivity, encouraging team morale, and using language that inspires collaboration.

Your score 0  7.35 10

Group score 0  7.19 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

8
Total responses

Summary

This score reflects strong competence in maintaining attentive presence and contributing positive energy to team environments. At this level, you consistently demonstrate focus during interactions and use motivational language effectively in most situations. Development activities: Mentor peers on techniques for sustaining attention in virtual settings, experiment with advanced active listening methods such as reflective summarizing, and take on roles that require inspiring others during challenging project phases to further refine your capability.

- Your score in this game is in the top 48% of 953 games completed so far.

Response Journal

Move 1

Task

You've submitted your first significant code contribution to Raj's team—two weeks of intensive work integrating a cloud authentication module. His technical review arrives within hours: "Functional. See inline comments. Deploy to staging." You open the repository to find seventeen inline comments, each technically precise but emotionally opaque. "Refactor this." "Why this approach?" "Consider edge cases." No praise, no criticism, just observations. You are left thinking : Does "functional" mean adequate or barely acceptable? Are these comments routine or red flags? You recall Raj's reputation for building high-performing teams, but his camera-off meetings and minimal verbal input have given you no baseline for interpreting his communication style. Your cohort mate Marcus received similar feedback last week and seemed unbothered, but you find yourself drafting and deleting three different response messages, each attempting to extract clarity about whether you've met expectations. You wonder if asking directly signals insecurity or professionalism. Keiko mentioned in orientation that Raj values independence, but you're genuinely uncertain whether to iterate further or proceed to staging. His online status shows "active" but he hasn't expanded on any comment despite your reading them two hours ago. What would you do?

Your Response

Review each of Raj's inline comments carefully, implement the requested changes with thoughtful consideration of the technical rationale, and add brief replies to his questions in the code review explaining your implementation choices. Once complete, send a concise Slack message confirming you've addressed the feedback and are proceeding to staging deployment.

Initial Response

I would review all comments carefully, address the requested changes, and proceed with staging. If any feedback remains unclear, I would ask Raj a concise, professional question to clarify expectations while focusing on learning and improvement.

Reason for Response

No reasons linked

Move 2

Task

Your ILP cohort is in hour two of a virtual architecture design session facilitated by Thomas Chen. The task: collaboratively design a microservices framework for a hypothetical client. Sofia and three other trainees have been energetically debating approaches, their voices overlapping with increasing intensity. You've contributed several times, feeling engaged by the technical challenge. Then you notice that during the session Marcus's video shows him nodding occasionally but he hasn't spoken in forty minutes. Another trainee, Emma, has her mic muted and has typed nothing in chat. Thomas hasn't intervened, seemingly comfortable with the organic flow. You're genuinely torn—the current discussion is productive and building momentum toward a solid solution. Pausing to explicitly invite quieter members might disrupt the flow of discussion. Yet you recall Thomas's session last week on inclusive collaboration, and you wonder if Marcus's silence masks something beyond agreement. Sofia is mid-sentence proposing an API gateway pattern that actually complements something Emma mentioned in yesterday's discussion thread—a connection no one else seems to remember. The whiteboard is filling rapidly with the loud voices' ideas. You are in dilemma about the solution emerging with few voices not involved in shaping it, at all. What would you do in such scenario to ensure participation from everyone present in the session?

Your Response

Acknowledge Sofia's API gateway suggestion, then explicitly connect it to Emma's async thread contribution, directly inviting Emma to build on her earlier idea and asking Marcus for his technical perspective on integration patterns.

Initial Response

I would respectfully create space for quieter members by inviting their perspectives, for example : 'Marcus and Emma, we haven't heard from you yet-do you have any thoughts or concerns ?' This keeps the discussion inclusive while maintaining momentum

Reason for Response

No reasons linked

Move 3

Task

You've spent six intensive weeks becoming proficient in the organization's legacy development framework—a complex system that Dr. Venkataraman assured you was foundational to 60% of production applications. You've finally achieved confidence, even beginning to see elegant solutions where you once saw only confusion. Your recent assignments have earned increasingly positive feedback. This morning, Raj sent a division-wide announcement: the organization is accelerating its technology modernization initiative, migrating all new development to a completely different stack you've barely touched. Effective immediately, your remaining ILP curriculum is being redesigned. Next week, you'll begin intensive training in the new framework. Everything you've learnt so far remains technically valuable but practically obsolete for your upcoming projects. During the emergency call with peers, reactions vary wildly—Sofia seems energized by the changes announced, while Marcus looks visibly distressed. Thomas, facilitating the call, acknowledges this is disruptive but frames it as "authentic exposure to industry realities." You feel a complicated mix of frustration at wasted effort, anxiety about restarting your learning curve, and uncertainty about whether you shall be able to sustain another steep climb. Your carefully constructed study systems and mental models need rebuilding. Keiko has scheduled optional one-on-one meetings to hand hold the peers during this transition. What would you do in such scenario?

Your Response

Acknowledge your frustration about the timing but commit to viewing this as an opportunity to demonstrate learning agility, then dive immediately into the new framework materials to gain early momentum.

Initial Response

I would acknowledge the change, focus on transferable skills, create a learning plan, and support teammates through the transition.

Reason for Response

No reasons linked

Move 4

Task

Dr. Venkataraman is live-demonstrating a database optimization technique that directly addresses the performance issue you've been struggling with all week. She's moving quickly through her commands, explaining the logic as she types. This is the breakthrough you need. Simultaneously, your phone vibrates—twice, three times. You glance down: Keiko is requesting urgent feedback on a draft learning plan that impacts your schedule, due by end of day. You look back to the screen; Dr. Venkataraman has executed several commands you didn't catch. You open the Slack message on your other monitor—just to see the full context. It's detailed, requiring thoughtful response. Back to the demo: she's now explaining why a particular index structure matters, but you're reconstructing what you missed, and her current words aren't landing because you're mentally reviewing the previous segment. Another notification—your project team needs your input on a meeting time for this afternoon. Dr. Venkataraman shares her screen to show execution time improvements: "Notice what happened here?" she asks. You're staring at the results, unsure what specifically she wants you to notice because you were reading Keiko's second message. Your demo notes have gaps. Someone asks a clarifying question that you were about to ask, and her answer flies past as you're typing a holding response to your team. What would you do?

Your Response

Set up an automated response message indicating you're in a training session and will respond within two hours. This allows you to focus on the demonstration while managing stakeholder expectations professionally. The automated response demonstrates proactive communication without requiring your ongoing attention, letting you stay present in the learning session.

Initial Response

I would prioritize the live demo, minimize distractions, take notes, and respond to other requests after the session.

Reason for Response

No reasons linked

Move 5

Task

Marcus has been your anchor throughout the ILP—the peer who responds to late-night questions, shares study resources unprompted, and offers genuine encouragement when assignments feel overwhelming. For three weeks, this pattern has been reliable. Now, suddenly, he's different. He missed yesterday's group study session without explanation. His usually detailed responses have become brief: "Sounds good" and "Whatever works." He declined your invitation to a program this morning with a simple "Can't today." In this afternoon's presentation exercise, you noticed his hands trembling more than usual, and he volunteered to go first with what seemed like forced enthusiasm. His technical contribution was flawless, but something felt off. After the session, he immediately left the call without his typical post-session banter. You're concerned, but you're also genuinely uncertain about the boundaries of peer relationships—is reaching out supportive or intrusive? You barely know him beyond the professional context. He's always been the helper but reversing that, might embarrass him or hurt him. Yet you keep thinking about his forced cheerfulness and those shaking hands. Sofia mentioned in passing that Marcus seemed "weird" lately but didn't elaborate. You have his personal number but have only used it for logistics. You could ask casually in the cohort chat, message privately, or respect what might be intentional distance. What would you do?

Your Response

Send Marcus a brief, warm private message acknowledging you've noticed he seems different lately, expressing genuine concern without pressure, and offering to listen if he ever wants to talk—making clear there's no obligation to respond.

Initial Response

I would send Marcus a private, supportive message: 'I've noticed you seem quieter lately. No pressure, but if you'd like to talk or need support, I'm here'

Reason for Response

No reasons linked

Move 6

Task

Dr. Venkataraman just spent twenty-five minutes explaining distributed transaction management—a concept foundational to your upcoming project work. You understood perhaps 60% of it. The parts you missed weren't minor details but core logical connections about how the two-phase commit protocol handles failure scenarios. She asked, "Questions?" with her typical speed and accuracy. Silence filled the virtual room as none said anything. She continued, "Good. This understanding is essential for next week's architecture assignment where you'll implement this pattern." Your mind races with calculations: she emphasized this is "essential," meaning your confusion can cause major impact. However, she also showed slight impatience when someone asked her to repeat something earlier in the session. You know she values preparation, and you wonder if you should have read the pre-reading materials carefully which you just glanced through. Several cohort members have their cameras off—are they confused too, or is it just you? Marcus would normally ask clarifying questions, but he's been quiet today. If you ask now, everyone hears your confusion. The chat is empty. She's already advancing her slides to the next topic. You could message her privately after class, but she's explicitly stated she prefers questions in the moment for "collective learning." You're now half-listening to her new topic while mentally rehearsing how to phrase your question without sounding lost. What would you do?

Your Response

Unmute yourself immediately and ask Dr. Venkataraman to clarify the specific failure scenarios in the two-phase commit protocol, acknowledging that you understood the general concept but want to ensure you grasp the critical details for the upcoming assignment.

Initial Response

I would ask a concise question immediately so I can understand the concept correctly and learn with the group

Reason for Response

No reasons linked

Move 7

Task

You're fifteen minutes into the cohort's final technical presentation to senior architects—the final assessment where each trainee demonstrates their integrated project work. Raj is attending with camera on for the first time, along with division leads you've never met. Marcus just finished his flawless demo. You're presenting next. Suddenly, Sofia's screen share freezes mid-sentence during her segment. Her audio cuts out. The chat explodes: "Can't access the shared environment." "Database connection is not happening." Dr. Venkataraman's face tightens as she investigates. The shared development infrastructure—hosting everyone's projects including yours—has gone down. Thirty seconds of chaos. Someone unmutes to ask if they should restart their services. Thomas tries to restore order: "Everyone mute please while we assess." You feel anxious. Your project was working perfectly five minutes ago, but now you can't verify anything. The senior architects are silent, watching. You feel nervous every minute even though you did nothing wrong and it's a technical glitch. Sofia remutes, and you glimpse her video—she looks devastated, though the infrastructure failure isn't her fault either. Dr. Venkataraman announces: "We need five minutes. Stay on the call." But your thoughts are filling up endlessly your mind about your demo failing, anger at the timing, anxiety about the architects' impressions, frustration at your lack of control. Marcus messages you privately regarding the prevalent situation: "This is a nightmare." What would you do?

Your Response

Use this moment to practice the mindfulness techniques Thomas taught in professional skills sessions. Ground yourself in the present reality: you didn't cause this, the senior architects understand infrastructure failures happen, and your preparation stands regardless. Then constructively offer to help Dr. Venkataraman troubleshoot if an extra pair of hands would be useful.

Initial Response

I would stay calm, focus on what I can control, support the team, and prepare for the demo once the issue is resolved

Reason for Response

No reasons linked

Move 8

Task

The rapid-fire quiz has been exciting so far. When Dr. Venkataraman asked for a volunteer to represent your group in the final round, you raised your hand, energized by the earlier rounds you'd watched. Now you're standing virtually alone in the spotlight—screen shared, unmuted, with your four teammates' faces visible on your laptop screen alongside the rest of the cohort. Dr. Venkataraman poses the question: a complex scenario involving distributed cache invalidation patterns across microservices. A wave of anxiety hits you. You studied this topic briefly, but it's easily your weakest area. The concepts are jumbled in your mind—you know bits and pieces but can't assemble them confidently. You try to answer but then stop. Seven seconds left. In the corner of your screen, you see your teammate Sarah unmute briefly—'Come on, just answer something!'—then mute again. Another teammate types urgently in the group chat: 'SAY ANYTHING.' You feel even more nervous now. You're aware of Dr. Venkataraman waiting, of Marcus watching sympathetically, of Sofia probably fascinated by the drama. Five seconds. Your mind oscillates between a half-formed answer that might be completely wrong, admitting you don't know, and freezing entirely. Your group's collective score depends on your answer, and their disappointment is visible. Three seconds left for you to answer. What would you do?

Your Response

You provide your best-effort answer by synthesizing the fragments you recall, clearly framing it as your current understanding: 'Based on what I've studied, distributed cache invalidation requires...' and walk through your reasoning step-by-step, acknowledging at the end that you recognize this may not be complete and would appreciate understanding where your reasoning diverges from best practices.

Initial Response

I would give my best understanding, clearly state any uncertainty, and stay open to correction

Reason for Response

No reasons linked

Move 9

Task

You're ninety minutes into Thomas Chen's integrated workshop on API gateway patterns and their business implications—content that directly feeds into next week's assessment and influences the Resource Management Group's project allocation decisions. Initially, you were engaged, mapping the technical concepts to business outcomes with genuine interest. But now, fatigue is setting in. Your mind drifts to the three unread messages on your phone, you glimpsed before the session. You catch yourself re-reading the same slide twice without comprehension. Around you also, you feel disengagement: Sofia is clearly browsing another tab, her eyes tracking horizontally in a pattern that doesn't match the shared screen. Two other trainees have switched off their camera probably out of disinterest in session. Someone's mic picks up conversation in lower voice about whether the upcoming group activity is really mandatory. Thomas continues explaining technical concepts—information you genuinely need but aren't absorbing. He announces: 'In fifteen minutes, we'll break into collaborative problem-solving teams. Your engagement and contribution will be observed and scored, contributing to your team engagement metrics.' You perceive the rising importance of the upcoming activity, even as your internal tension rises. You also know that if the group's energy remains this low, the activity will underperform, reflecting poorly on everyone. You also recognize that your own fragmented attention is undermining your preparation for both the exercise and the assessment. The question arises: how can you regain focus and presence as the group's motivation declines—without seeming overbearing to peers who appear equally fatigued. What would you do?

Your Response

Acknowledge your current state and use Thomas's upcoming break announcement as a natural reset point. Take thirty seconds to close your eyes, take three deliberate breaths, and mentally commit to full engagement for the final fifteen minutes before the group activity. Disable notifications on all devices and reposition your phone out of reach to eliminate passive distraction.

Initial Response

I would refocus myself by removing myself by removing distractions, taking brief notes to stay engaged, and positively encouraging my team to prepare for the collaborative activity

Reason for Response

No reasons linked

Move 10

Task

There is a trainee named Arush who has joined your batch in ILP training. During his brief introduction, you notice he speaks with a slight speech impediment—a stutter that becomes more pronounced when he's nervous. Thomas mentions privately to you that Arush has a neurological condition that occasionally affects his speech fluidity but doesn't impact his technical capabilities. In the first group breakout session, you observe that when Arush begins to contribute an idea but takes longer to articulate it, Sofía jumps in with her own thought, and the conversation flows past his incomplete sentence. By the second session, he's muted more than he speaks. Marcus, usually inclusive, has naturally gravitated toward established relationships and inside jokes that Arush wasn't present to develop. During the lunch break, the cohort chat lights up with jokes—Arush posts a thoughtful question about morning's content, but it gets buried under a gif exchange. You notice gradually Arush has stopped turning his camera on. Yesterday, you saw him alone in an optional help session that usually draws clusters of trainees. Today, for the collaborative architecture design exercise, Thomas is forming teams. You watch in real-time as the implicit partnering happens through eye contact and chat messages—pairs and trios forming around existing comfort zones. Arush sits isolated, waiting to be assigned wherever there's space. His technical skills are clearly strong based on his contributions, but he still waits for being chosen to be in someone's team. Thomas hasn't actively intervened, perhaps waiting to see how the group's dynamics self-correct, or maybe he hasn't fully registered the pattern yet. You're positioned to choose your teammates right now. What would you do?

Your Response

Invite Arush to your team and initiate a brief team kickoff where you establish ground rules that value preparation time and equal contribution opportunities, then privately check in with Arush about communication preferences and any collaboration adjustments that would help him engage fully.

Initial Response

I would invite Arush to join my team, value his technical strengths, and ensure everyone has space to contribute respectfully and inclusively.

Reason for Response

No reasons linked
