Game Status

This section of the report is about the final outcome of your game, and how it compares with that of others.

Partial Success

This is one of 605 games so far with Partial
Success status

Other Games

- 293 Complete Success
- 604 Partial Success
- 8 Survived
- 68 Unsuccessful

Summary

Cymorg simulations have 4 possible outcomes. "Unsuccessful" games are those that players were unable to complete. A status of "Survived" means that you completed the exercise, but didn't achieve any of your goals or KPIs. A game is called "Partial Success" when one or more KPIs have been achieved, but at least one of them has not been met. "Complete Success" implies that all goals and KPIs have been met.

Targets & Achievements

This section is all about how you performed in the game, with respect to the targets and KPIs that were set for you. When viewing this report online, use the arrows on either side to scroll through the individual targets. For each target, you will find your final performance on the left. The target is depicted on the dial, while your performance is depicted by the pointer. To its right you will see how your score progressed after every move, along with a group comparison in blue.

Technical Skills Proficiency Score

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is in the top 21% of 974 games completed so far.

Team Collaboration Effectiveness Rating

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is in the top 34% of 974 games completed so far.

Training Milestone Completion Rate

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is in the top 36% of 974 games completed so far.

Professional Behavior and Workplace Readiness Score

Summary

Congratulations! You managed to achieve the target, in this game. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is higher than that in 32% of 974 games completed so far.

Business Acumen Development Index

Summary

Congratulations! You managed to comfortably achieve the target, in this game, and go beyond. That is an achievement to be proud of: targets and KPIs are not easy to meet in Cymorg simulations. But please don't rest on your oars! We strongly urge you to try the simulation a couple of more times on your own, and try different approaches to respond to each scenario. Observe whether you manage to hit your targets each time. You will refine your intuitive understanding of which approaches are likelier to yield good outcomes, and that is at the core of all learning.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is in the top 1% of 974 games completed so far.

Learning Agility and Adaptability Score

Summary

You were unable to achieve the target, in this game. Take heart: Cymorg simulations are carefully calibrated to make it tricky for participants to achieve some KPI's. Just like in real life, sometimes it simply isn't possible to achieve every one of your KPIs. The important thing is to ensure that you respond to every task to the best of your ability, and to learn by observing how data changes. Over time, you will learn how to hit every target.

Your performance in this game, for this KPI, did not differ significantly from the average performance of people in your peer group, for the same KPI.

Your score in this game is higher than that in 47% of 974 games completed so far.

Competency

This section of the report discusses the behavioral competencies that are fundamental to your success in the role. When viewing this section online, please use the arrows at either end to scroll through the competencies. For each competency, the donut depicts the actions you took relevant to that competency, divided into "Most Appropriate", "Intermediate" and "Least Appropriate". Click on "View Details" to see a detailed breakdown of each of your actions.

Analytical Skills

The ability to demonstrate strong problem-solving and collaboration skills by clearly defining problems and objectives for accurate analysis. Breaking down complex issues into manageable tasks using logical structuring, apply analytical techniques such as data interpretation and root cause analysis, and work effectively with peers to integrate diverse inputs for better outcomes.

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

5
Total responses

Summary

Your score reflects exceptional mastery in analytical thinking and collaborative problem-solving. You demonstrate sophisticated ability to define problems clearly, structure complex issues systematically, and integrate diverse inputs effectively. Leverage this strength by mentoring peers who are developing their analytical skills during group work. Explore cutting-edge analytical frameworks in your technology area and experiment with innovative approaches to root cause analysis. Consider how you can contribute to improving team processes by introducing structured analytical methods that enhance collective problem-solving during training deliverables.

- Your score in this game is in the top 38% of 974 games completed so far.

Effective Communication

The ability communicate effectively with clarity and structured articulation, demonstrating active listening and responsiveness. Use appropriate non-verbal cues, asks relevant questions, and provide well-thought-out answers. Maintaining professionalism and being confident in interactions while ensuring written communication is clear, consistent, and logically accurate.

Your score 0  8.37 10

Group score 0  8.61 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

9
Total responses

Summary

Your performance demonstrates exceptional mastery of effective communication across multiple dimensions. At this level, you consistently exhibit clarity, structured articulation, active listening, and professional confidence in all interactions. To leverage this strength, take leadership in facilitating cross-functional team communications during training projects. Share best practices with peers on articulating complex technical information clearly. Explore advanced communication techniques such as stakeholder management and influence strategies. Consider documenting communication frameworks that help your team collaborate more effectively, positioning yourself as a communication resource within your cohort as you prepare for project assignments.

- Your score in this game is higher than that in 36% of 974 games completed so far.

Excellence

The ability to prioritize client needs and delivering value consistently. Maintaining high standards and attention to detail while promoting technical rigor and innovation. Show strong commitment to follow through on promises and approach tasks with enthusiasm and persistence to achieve goals.

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

3
Total responses

Summary

Your performance indicates exceptional mastery of excellence principles, consistently demonstrating high standards, technical rigor, and unwavering commitment. You naturally prioritize value delivery and approach challenges with remarkable enthusiasm and persistence. To leverage this strength further, position yourself as a quality champion within your training cohort by sharing best practices with peers. Explore advanced technical concepts that push innovation boundaries in your learning projects. Seek opportunities to contribute ideas that enhance training processes or deliverable quality. Your consistent excellence serves as a powerful model for others navigating the transition from academic to professional standards.

- Your score in this game is in the top 1% of 974 games completed so far.

Growth Mindset

Demonstrating a strong growth mindset by acquiring new knowledge and skills to remain effective. Adapting seamlessly to changing priorities and environments while embracing creativity and innovative ideas for continuous improvement. The ability to respond with agility to evolving situations and maintains resilience under pressure, ensuring focus and performance even during setbacks.

Your score 0  10

Group score 0  10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

4
Total responses

Summary

Your performance indicates exceptional mastery in embracing continuous learning, adapting seamlessly to shifting priorities, and maintaining outstanding resilience under pressure. At this excellence level, you demonstrate remarkable agility in acquiring diverse skills while contributing innovative ideas that enhance team effectiveness. To leverage this strength further, focus on modeling growth mindset behaviors that elevate your entire peer group. Development activities: Lead knowledge-sharing sessions where you demonstrate effective learning strategies for complex technologies. Create frameworks or tools that help teammates navigate change more effectively. Challenge yourself with advanced certifications or projects outside your comfort zone to sustain your exceptional learning trajectory.

- Your score in this game is in the top 27% of 974 games completed so far.

Integrity

The ability to practice integrity by being genuine and transparent in actions and communication. Leading by example through ethical and professional behavior, making decisions guided by strong moral principles, and honor commitments while maintaining confidentiality. Communicate openly and constructively to build trust and credibility.

Your score 0  8.62 10

Group score 0  8.47 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

6
Total responses

Summary

This score reflects exceptional mastery in demonstrating integrity across all interactions during your training period. Your performance indicates that you consistently serve as a model for ethical behavior, transparent communication, and trustworthy conduct. Development activities: Share your approach to ethical decision-making in team forums to benefit peers, take on responsibility for establishing norms around confidentiality and accountability in group projects, and explore how integrity principles apply in increasingly complex business scenarios. Consider documenting integrity-related challenges you observe and facilitate discussions on navigating ethical dilemmas. Your advanced capability positions you to shape workplace culture positively from the outset of your career.

- Your score in this game is in the top 50% of 974 games completed so far.

The ability to think beyond immediate tasks by envisioning long-term goals and driving innovative ideas forward. Showing initiative and entrepreneurial spirit, embrace creativity, and challenge the status quo to deliver impactful solutions. Contributing to sustainable organizational and societal value while making decisions that reflect responsibility towards the environment and community.

Group score 0 7.60 10

Undesired outcomes likely Detracts from desired results Results not consistent Desired results likely Likely to exceed desired results

0 2 4 6 8 10

1
Total responses

This score reflects exceptional mastery in leading innovative thinking and championing transformative change. Your performance indicates outstanding ability to envision long-term possibilities, demonstrate entrepreneurial spirit, and integrate sustainability considerations into your approach. To leverage this excellence, become a change advocate within your cohort by sharing best practices with your peers. Explore advanced frameworks for sustainable technology development and responsible innovation. Consider how you can influence training processes themselves by proposing enhancements that benefit future cohorts, demonstrating thought leadership that creates lasting organizational and community value. Your score in this game is in the top 1% of 974 games completed so far.

Learning & Sharing

The ability to show strong commitment to organizational goals by prioritizing collective success over individual interests. Actively seeking opportunities for continual learning and skill enhancement, sharing knowledge to support team growth, and provide guidance through mentoring. Contribute innovative ideas that influence organizational practices and promote thought leadership.

Your score 0  6.92 10

Group score 0  7.49 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

3
Total responses

Summary

This score reflects strong performance in both continuous learning and collaborative knowledge exchange within the training environment. You demonstrate a solid commitment to organizational objectives and peer development. To enhance further: Take initiative to informally mentor peers who are struggling with specific technologies or concepts; propose one process improvement based on your training experience to your faculty or HR; actively seek cross-functional learning opportunities that bridge technical and business skills, then synthesize these insights for your team's benefit.

- Your score in this game is higher than that in 30% of 974 games completed so far.

Professional Behaviour & Etiquette

The ability to show professionalism through a positive attitude even under pressure, while adhering to organizational norms. Maintaining a neat appearance, following digital etiquette, and communicating respectfully. Being punctual and actively participating in meetings, and keeping the workspace organized.

Your score 0  8.80 10

Group score 0  8.28 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

10
Total responses

Summary

Your performance indicates exceptional mastery of professional behavior and workplace etiquette throughout the training environment. You consistently demonstrate exemplary conduct across diverse situations, from structured learning sessions to collaborative team challenges. This level of professionalism positions you as a role model within your peer group. To maximize this strength, consider mentoring colleagues who are developing their professional skills and contributing to a positive culture within your training cohort. Explore opportunities to represent your team in interactions with senior faculty or organizational stakeholders, leveraging your professional excellence to build broader workplace credibility and leadership presence.

- Your score in this game is in the top 36% of 974 games completed so far.

Professional Grooming

Maintaining a professional appearance by adhering to grooming standards, including personal hygiene, neat attire, and confident body language. Pay strong attention to detail in dressing appropriately, ensuring a clean and well-presented look that reflects organizational expectations.

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

1
Total responses

Summary

Your performance indicates emerging awareness of professional presentation standards, though consistency needs strengthening. You show potential in understanding workplace grooming expectations but would benefit from developing more reliable practices. Focus on establishing structured morning routines that ensure readiness before arriving at training sessions. Pay attention to how your presentation compares to organizational norms during team collaborations and formal sessions. Invest time in building a professional wardrobe suited to your workplace environment and practice maintaining confident body language during presentations. Seek periodic check-ins with peers or mentors to refine your approach and address any gaps in professional presentation.

- Your score in this game is higher than that in 21% of 974 games completed so far.

Respect for Individual

Demonstrating respect for individuals by showing genuine empathy and care in interactions. Respecting diverse perspectives and fostering an inclusive environment where everyone feels heard. Supporting team well-being through flexibility, acknowledging contributions with humility, and collaborating effectively to build mutual trust and achieve shared goals.

Your score 0  9 10

Group score 0  8.76 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

4
Total responses

Summary

This score reflects exceptional mastery in demonstrating empathy, valuing diversity, and creating truly inclusive team environments. Your performance indicates advanced capability in building mutual trust and supporting collective success with humility. Leverage this strength by becoming a role model for inclusive collaboration within your training cohort. Design team activities that intentionally surface and celebrate diverse perspectives on both technical and business challenges. Partner with faculty to share insights on effective team dynamics, and consider documenting inclusive practices that could benefit future cohorts entering the agile training environment.

- Your score in this game is in the top 50% of 974 games completed so far.

Stakeholder Handling

Demonstrate strong stakeholder management skills by identifying all key individuals and groups impacted by decisions. Effectively sets clear roles and expectations, prioritizes stakeholders based on influence and impact, and drives alignment to achieve shared goals and successful outcomes.

Your score 0  7.80 10

Group score 0  7.67 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

6
Total responses

Summary

At this level, you demonstrate strong stakeholder management abilities, showing awareness of multiple perspectives and managing relationships proactively. You effectively identify stakeholders and work toward alignment in your training projects. To enhance further, deepen your skills in managing conflicting stakeholder priorities by facilitating discussions that find common ground. Take initiative in creating communication plans that address different stakeholder preferences. Mentor peers who struggle with stakeholder engagement, which will refine your own expertise and position you as a collaborative leader within your cohort.

- Your score in this game is higher than that in 48% of 974 games completed so far.

Team Work Skills

The ability to make timely, informed decisions and build trust and positive relationships with empathy. Taking ownership of actions and outcomes with transparency, delegate tasks effectively, and communicate clearly. The ability to handle conflicts constructively, ensuring collaboration and smooth progress toward shared goals.

Your score 0  8.33 10

Group score 0  8.53 10

The Cymorg competency scale goes from 0 to 10

Responses that impacted this Competency

10
Total responses

Summary

Your exceptional score demonstrates mastery-level teamwork skills that position you as a collaborative leader within your training cohort. This performance level indicates sophisticated capability in building trust, facilitating productive team dynamics, and driving collective success across diverse groups. To leverage and expand this expertise, consider taking on informal leadership roles that help strengthen your entire peer group's collaboration, such as organizing knowledge-sharing sessions or creating communication frameworks others can adopt. Challenge yourself by proactively bridging gaps between team members from different backgrounds and serving as a sounding board for conflict resolution. Document your collaboration strategies to share insights with faculty and contribute to improving the training environment for future cohorts.

- Your score in this game is higher than that in 36% of 974 games completed so far.

Confidence Level

This section depicts the level of confidence you expressed as part of your responses, over the course of this game.

Response Journal

Move 1

Task

It's your third day of training, and Marcus Chen has called an impromptu group progress review session to assess how everyone is tracking against the week's learning objectives. Your peer, Arjun, confidently presents that he completed the JavaScript module yesterday and has already begun working on the React framework exercises. However, you were pair-programming with him just yesterday afternoon in the open learning lab, and you clearly remember him struggling with basic JavaScript concepts—he hadn't even started the core exercises and seemed confused about fundamental syntax. The discrepancy is significant because your team's first milestone deliverable is due in three days, and Rajiv Mehta will be conducting a comprehensive evaluation this afternoon to determine which groups are on track and which need intervention. You notice Marcus leaning forward slightly, his expression thoughtful, as if he's picked up on something too, and he's making notes on his tablet. Sana Khan, your peer group leader, is documenting everyone's progress in the shared tracker and seems to accept Arjun's update at face value, already typing his reported completion status. You're aware that Arjun comes from a small town and mentioned during the ice-breaker session feeling immense pressure to prove himself among peers from metropolitan areas with more technical exposure. He's also mentioned that his family has made significant financial sacrifices for his education. The review format allows for peer clarifications and questions, but there are eight other people in this conference room, and calling out a discrepancy could humiliate Arjun in front of everyone, potentially damaging his confidence and your relationship with him. Yet, if his actual status isn't communicated accurately, it could affect the group's resource allocation, mentoring assignments, and potentially cause the entire team to miss the milestone, which would reflect poorly on everyone's Training Milestone Completion Rate. You also realize that if Arjun continues on this path, he might fail the upcoming technical assessment, which could jeopardize his continuation in the program. Moreover, you're uncertain whether Arjun is intentionally misrepresenting his progress or genuinely believes he's further along than he actually is. Adding to the complexity, you overheard two other peers, Priya and Dev, discussing yesterday that they're also struggling but felt pressured to keep up appearances. Marcus is now asking if anyone has questions or clarifications about the progress shared, and his eyes briefly meet yours, almost expectantly. The silence hangs heavy in the room. What would you do?

Your Response

After the meeting concludes, approach both Marcus and Sana together to share your observation from the pair-programming session, express concern about the accuracy of the group's tracker affecting resource allocation for the milestone, and ask for their guidance on how to handle the situation in a way that supports both Arjun's development and the team's success.

Initial Response

I'd like to clarify something to ensure we're all aligned. Arjun and I worked together yesterday, and my understanding was that some of the javascript fundamentals were still in progress

Reason for Response

No reasons linked

Confidence Level Selected

Extremely confident

Move 2

Task

It's 9 PM, the night before your group's capstone presentation to senior leadership—worth 40% of your training evaluation. Rohit, your team's presenter, just shared the final deck. Your heart sinks: his technical approach contradicts your research, uses an outdated framework faculty warned against, inflates costs by 30%, and ignores the client's cloud-native requirement for on-premise infrastructure. He's also claimed Meera's ideas as his own. When you point out a discrepancy, Rohit dismisses you: 'Trust me, I've seen how real companies work'—reminding everyone of his tier-1 engineering degree. Kavya, your fourth teammate, notices the issues but stays silent; Rohit helped her brother get an interview at his father's firm. Your faculty guide has no connectivity until 8 AM tomorrow—one hour before your 9 AM slot. Meera wants to escalate to HR, but that risks your reputation as 'difficult to work with' in your first month. Last week, another team was collectively downgraded despite individual members knowing better. You just discovered Rohit changed the approved deck only six hours ago—the edit history proves it, but raising this might seem like blame-shifting. However, you also notice that Rohit used version control incorrectly, and the previous accurate version might be permanently overwritten if you don't act now. Meanwhile, Kavya has started subtly discouraging Meera in the group chat, suggesting 'we should trust Rohit's industry exposure.' You could call Rohit privately, request an emergency meeting (risking a 2-vs-2 standoff), prepare backup slides to intervene during the presentation (risking public discord), or document the situation and present as-is to protect yourself individually—though that means knowingly participating in a failing presentation. The technical architects are known for probing questions, and presentation results factor into project allocations. Meera texts: 'If we present this, we all fail. If we fight now, we might fail anyway. What do we do?' What would you do?

Your Response

Secure the last faculty-approved deck in version control, call an immediate all-hands video huddle, calmly present the documented discrepancies and edit history, gain consensus to revert to the compliant version, re-allocate overnight tasks to fix gaps, and inform the faculty guide at 8 AM with a united recovery plan.

Initial Response

call an emergency team meeting immediately and present the evidence then work together to correct the deck before the presentation

Reason for Response

No reasons linked

Confidence Level Selected

Extremely confident

Move 3

Task

Your team has spent three weeks developing a customer service chatbot as your first major training deliverable. The demo is scheduled for this afternoon in front of Ananya Patel, Rajiv Mehta, and several senior architects who'll assess your technical proficiency and business acumen. Your role was integrating the natural language processing module, and you've tested it extensively—it works beautifully for 90% of queries. This morning, while doing a final run-through alone, you discovered that the chatbot completely fails when users input questions with certain special characters, returning nonsensical responses. You dig deeper and realize the issue stems from a fundamental misunderstanding you had about string encoding—a concept Ananya covered in week one that you thought you'd grasped. The problem is fixable, but doing it properly would take at least four hours and require rebuilding core components. You could implement a quick patch that hides the error by filtering out special characters, which would make the demo run smoothly, but it's essentially masking the problem rather than solving it. Your team members—who've worked equally hard—are counting on this presentation to meet the milestone completion criteria. They have no idea about this flaw, and the demo script you've prepared carefully avoids triggering it. Sana Khan has already praised your team's work in the morning standup. The clock shows 11:47 AM. What would you do?

Your Response

Immediately inform your team about the issue, demonstrate the flaw to them, and collectively decide whether to request a brief delay from Ananya to implement the proper fix or proceed with transparency about the limitation during the demo, explaining your diagnosis and proposed solution timeline.

Initial Response

Inform the team immediately about the flaw, explain the impact honestly, and work together on the best possible fix before the demo rather than hiding the issue with a patch

Reason for Response

No reasons linked

Confidence Level Selected

Extremely confident

Move 4

Task

Your peer group faces a Friday deadline: complete a full-stack application integration to meet training milestones. During today's planning, Vikram—who's been struggling technically with the lowest proficiency scores—volunteers for the backend API integration, the most complex component. Sneha and Rohit, your strongest members, have claimed frontend styling and documentation—much easier tasks. Vikram is trying to prove himself but is set up for failure. Sneha and Rohit have positioned themselves for easy wins. The inequity bothers you. However, speaking up means you'll likely absorb Vikram's burden, risking your own proficiency scores. Last week, Ananya Patel emphasized that self-organization and task negotiation are key agile competencies she's evaluating. Marcus Chen is facilitating but hasn't intervened, watching group dynamics carefully. Sana Khan is absent due to illness. Adding pressure: if the integration fails, the entire cohort's milestone gets delayed, affecting everyone's training progression. You also overheard Vikram mention he's supporting his family financially and desperately needs strong performance reviews. The team is waiting to finalize the task board. What would you do?

Your Response

Acknowledge Vikram's initiative publicly, then suggest restructuring tasks by breaking the backend API integration into smaller components—authentication, data layer, and endpoints—distributing them across the team while you take on the most complex endpoint integration alongside documentation of technical decisions.

Initial Response

Redistribute the work based on skills and support Vikram with the integration task instead of leaving him alone with the hardest component

Reason for Response

No reasons linked

Confidence Level Selected

Extremely confident

Move 5

Task

Your six-person team is developing TechRetail Corp's recommendation engine—the cohort's flagship project. Three weeks ago, Rajiv Mehta's workshop advocated precision-optimized models for retail, which your team leader Sana Khan embraced. The mock client stakeholders approved this strategy. However, your late-night analysis reveals a recall-optimized approach would generate 23% better business outcomes, validated through multiple methods and recent research. Tomorrow's sprint review looms: Priya finished the precision-model presentation; Sana cited your approach as best practice to other teams; two teams copied your strategy. You have a 15-page analysis, but risks multiply: you might be wrong, damaging credibility across the 50-person cohort; the team could see three weeks wasted; clients might view you as disorganized; or you could be right, and Rajiv's framework—while sound generally—may not fit TechRetail's younger demographics. Rajiv did say 'frameworks are starting points' and encouraged analytical rigor, and Ananya mentioned 'challenging frameworks with data' before being interrupted. Complicating matters: Sana just texted the team celebrating preliminary positive feedback she received from program leadership about your approach, and she's mentioned your methodology in her weekly reflection journal that trainers review. Meanwhile, you noticed another team struggled yesterday after switching approaches mid-project, receiving harsh feedback about inconsistency. The training program emphasized integrity and courage, but also professionalism and team cohesion. Options: present to Rajiv privately first; discuss with Sana for alignment; raise it during the review; consult Ananya quickly; or trust the established framework. Each choice impacts team dynamics, learning outcomes, relationships, and deliverable quality differently. What do you do?

Your Response

Bring your concerns to Sana immediately with your complete analysis, emphasizing that you want to validate your findings with her before tomorrow's review. Position this as supporting her leadership by ensuring the team presents the strongest possible solution, and collaboratively decide whether to involve Rajiv or adjust the approach.

Initial Response

I'd share my analysis and evidence with Sana first, discuss the potential impact, and work with the team to decide whether the strategy should be adjusted based on the data

Reason for Response

No reasons linked

Confidence Level Selected

Extremely confident

Move 6

Task

Karthik joined your training cohort with a strong regional accent that some find challenging to understand. Over the past week, peers increasingly bypass him during pair programming, asking others to repeat his ideas or simply nodding without engagement. Yesterday, Marcus Chen raised communication standards at the retrospective, and you saw Sneha and others exchange glances when Karthik spoke. This morning, you overheard Rohit tell Sana Khan that assignments should account for 'communication efficiency.' The dilemma: Karthik has caught critical errors others missed, his programming fundamentals are strong, and his design pattern knowledge exceeds most of the cohort. Yet his contributions are being lost. You've understood him perfectly after a few days of active listening. Today's critical deliverable requires his database optimization expertise, yet the team just created a Slack channel excluding him to 'streamline communication.' Your collaboration ratings depend on team harmony metrics, but tomorrow's presentation to Lakshmi Iyer, the Diversity Lead, focuses on inclusive practices. Your mentor mentioned peer evaluations would significantly impact final assessments. Stand-up starts in ten minutes, where Karthik presents his database solution. Do you speak up about the exclusion and risk being labeled difficult by peers whose support you need, stay silent to preserve relationships while allowing harmful precedent, or address it privately with Sana Khan despite time constraints?

Your Response

Connect with Sana Khan after the stand-up to share your observations about team communication patterns and request her guidance on how to support better collaboration, while continuing to personally ensure you understand and amplify Karthik's contributions in your own interactions.

Initial Response

I'd speak with Sana privately about the communication barriers and the exclusion of Karthik, focusing on inclusive collaboration and ensuring everyone's contributions are valued

Reason for Response

No reasons linked

Confidence Level Selected

Extremely confident

Move 7

Task

Your capstone project—a predictive analytics dashboard combining machine learning and microservices—requires demonstrating both technical excellence and business value. Three weeks ago, you launched peer knowledge-sharing sessions, documenting your architecture, creating tutorials, and mentoring struggling teams late into the night. Last week, Ananya praised your work but warned: 'Teams B and C have replicated your designs. When everything looks alike, your differentiation disappears. The committee wants innovation. Also, some evaluators question whether giving away your edge shows the business judgment needed for client roles.' Yesterday, Rajiv observed your session and said privately: 'You've been teaching technical skills while asking basic questions about ROI frameworks and stakeholder communication—exposing weaknesses before evaluation. You're assessed on both technical AND business dimensions, weighted 40% business acumen, 35% technical, 15% presentation, 10% innovation. Business stakeholders care about ROI, not code.' Now you face a dilemma: Your openness may have eliminated your advantage while highlighting your gaps. Your teammate forwarded a thank-you message from another trainee—'You taught us everything we needed'—whose project is now cited as top-tier. Meanwhile, rumors circulate that you're 'technically strong but lacking business sense.' You recall Marcus saying, 'Growth mindset means being vulnerable to learn,' but also Ananya's words: 'Generosity without judgment isn't leadership—it's poor boundary management.' With three days until final presentations, Team C requests your help with deployment architecture—their only chance to succeed. Your team is split: two want you to stop sharing and strengthen your business case; one argues stopping now seems hypocritical. You've just learned peer feedback counts toward evaluation, and the Program Director emailed praising your 'collaborative spirit,' hinting at a peer mentor role—if you score in the top tier. What would you do?

Your Response

Provide Team C with architectural guidance in a structured 90-minute session, then pivot your remaining time to developing a comprehensive business case: create an ROI analysis for your dashboard, prepare stakeholder communication scenarios, and document how your knowledge-sharing approach accelerated overall cohort capability (a business outcome). Schedule a rehearsal with Rajiv focusing exclusively on articulating business value and addressing his specific feedback on ROI frameworks.

Initial Response

I'd continue supporting others where appropriate while balancing my own preparation, focusing on strengthening the business and stakeholder aspects of our project before the final evaluation

Task

Your first simulated client interaction—a mock video interview with a 'senior executive' (actually a senior architect evaluating your workplace readiness)—starts in ten minutes. Lakshmi Iyer emphasized this exercise is critical for client-facing role progression. You prepared meticulously: researched the fictional company, prepared talking points, dressed formally. Then disaster struck: you spilled coffee down your white shirt. The stain is unmissable. You rush to your locker. Your backup is a bright graphic t-shirt and jeans—completely inappropriate. Worse, you just learned your teammate Priya is scheduled immediately after you in the same room, and she's waiting outside. If you're late, she misses her slot too. You could: wash the shirt (it'll be wet and wrinkled), wear the t-shirt and explain honestly, try repositioning the camera to hide the stain, or request to reschedule (though Lakshmi said this signals poor reliability, and the coordinator just left for an urgent meeting). Your phone shows a message from the evaluator: 'Joining in 8 minutes. Running tight schedule today—cannot extend beyond 20 minutes.' Priya knocks anxiously, asking how much longer you'll need the room. Professional grooming is explicitly part of today's evaluation, and your decision affects both your assessment and your teammate's opportunity. What would you do?

Your Response

Proceed with the interview immediately with the stained shirt, and address it transparently at the beginning by briefly explaining the accident while emphasizing your commitment to the scheduled time. Focus the conversation on demonstrating your preparation and professional capabilities.

Initial Response

I would join on time, honestly explain the coffee spill to the interviewer, apologize for the appearance issue, ensure Priya's slot is not delayed, and focus on demonstrating professionalism, preparedness, and respect for everyone's time rather than trying to hide the problem or reschedule

Task

Your team's application has been selected by Ananya Patel as an exemplar to demonstrate to next month's incoming cohort—a significant recognition that boosts everyone's training evaluation. While doing final quality checks tonight, you're reviewing Deepak's authentication module, which has been praised for its elegant error handling and security features. Something feels familiar. You run the code through a search engine and discover that approximately 60% of Deepak's module is copied verbatim from a GitHub repository and a Stack Overflow discussion, with only variable names changed. No attribution, no comments indicating external sources. This violates the integrity policy Lakshmi Iyer covered during onboarding: using online resources is encouraged, but direct copying without attribution is considered academic dishonesty. The situation is complicated: Deepak's module works perfectly and genuinely solves the problem well. The original code is open-source, so legally using it isn't wrong—the issue is the lack of attribution and the implicit claim of original work. Your team's collective success is partially built on this module, and exposing this could taint the entire project's recognition. Deepak is a friend who's been struggling financially and mentioned that strong training evaluations could accelerate his salary progression. Tomorrow's showcase is at 10 AM. You could talk to Deepak privately first, but he might just add attribution now and the dishonesty remains hidden. You could inform Ananya directly, but that feels like betrayal. You could anonymously suggest a broader code review policy. What would you do?

Your Response

Speak with Deepak privately tonight about what you discovered, help him add proper attribution comments to the code, and suggest he proactively mention during tomorrow's showcase that he built upon existing open-source solutions—framing this as a demonstration of effective resource utilization rather than original creation.

Initial Response

I would speak with Deepak privately, explain the attribution issue, and ask him to correct it immediately. If the concern remains unresolved, I would inform Ananya to uphold integrity and fairness.

Task

During this week's technical challenge, you proposed an innovative approach to database optimization that differed from Ananya Patel's recommended method. Marcus Chen encouraged experimentation, saying 'Agile teams need people willing to try new approaches.' You convinced your team to try your method, taking ownership of the implementation. Today was the demo. Your optimization not only failed to improve performance—it made it worse, causing the application to crash during the live demonstration in front of Ananya, Rajiv, and two senior architects. The embarrassment was acute. Your team's training milestone is now at risk. After the demo, the atmosphere is tense. Priya suggests quickly reverting to Ananya's original approach—it's proven and would get the team back on track within a day, salvaging the milestone deadline. However, you've been analyzing the failure and believe you understand what went wrong: a misunderstanding about transaction isolation levels. You think you could fix it, but it would take another two days of effort, pushing past the milestone deadline, and there's no guarantee it would work. The conservative choice is obvious: admit defeat, revert, recover the timeline, and protect the team's metrics. But something in you resists. You believed in this approach, and the failure taught you something valuable about database architecture that Ananya's method wouldn't have revealed. Marcus's voice echoes: 'Failed experiments aren't failures if you learn.' Your team is looking to you. What would you do?

Your Response

Propose a hybrid approach to your team: immediately implement the revert to meet the milestone deadline while simultaneously documenting your failure analysis and submitting it as a detailed technical investigation report to Ananya, requesting her feedback on whether your hypothesis about transaction isolation levels is worth pursuing as a side learning project.

Initial Response

I would take ownership of the failure, help the team revert to the stable solution to meet the deadline, and document the technical insights gained so the experiment can be revisited safely later

Task

It's day five of your training program, and you're confronting a web of workplace challenges threatening your reputation before you've established yourself. Three days ago, your teammate Rahul made an inappropriate joke with regional stereotypes during an icebreaker with senior leadership present. Two teammates, Priya and Karthik, privately told you they're deeply uncomfortable working with Rahul on the business case project due in six days. As the newly elected team coordinator—chosen just yesterday despite being equally new—they expect you to address this, but you've never navigated workplace conflict before. Yesterday, Sneha approached you with visible discomfort. She overheard you on day two discussing another peer's technical assessment struggles near the cafeteria, calling them 'clearly not cut out for this level of work.' Your words, reflected back, sounded harsh and unprofessional. Worse, the peer in question, Divya, knows about the conversation and has been avoiding you. You violated basic workplace etiquette: discussing a colleague's performance publicly, using judgmental language, undermining someone's reputation in week one—all while having zero professional experience yourself. This morning you arrived nine minutes late to a critical technical workshop due to a building access issue. Rather than entering discreetly, you used the front door mid-presentation, forgot to apologize, and knocked over a water bottle. The facilitator made direct eye contact with an unreadable expression. This is your second late arrival this week, establishing a pattern of poor time management on your permanent record. Your roommate Amit, whom you met six days ago in shared company housing, has been taking personal calls during sessions, browsing social media during an external expert's presentation, eating noisy snacks, and arriving disheveled. When you mentioned this last night, he dismissed your concerns, accused you of 'buying into corporate culture' and 'acting superior,' creating apartment tension. Tomorrow evening is a networking dinner with senior leaders who'll decide project placements—described in orientation as a 'critical visibility moment.' The invitation specified 'business formal attire' in bold. Amit just told you he plans to wear jeans and a casual shirt because he 'didn't bring formal clothes.' He's asking you to 'have his back' and not 'make a big deal of it,' framing this as a test of friendship versus corporate conformity. You're concerned his behavior reflects on you as his known close friend. Meanwhile, your team's business case project is severely behind. Two team meetings have been awkward, with Priya and Karthik minimally contributing and avoiding Rahul. Your initial analysis framework missed key components that Karthik quietly corrected, deepening your self-doubt. Priya told you this morning she's 'reached her limit' and will escalate to HR today unless something changes. Your mentor Marcus Chen's first substantive check-in is tomorrow at 3 PM, immediately after a technical assessment you feel unprepared for. You're wrestling with whether to raise these issues: your cafeteria incident, Rahul's comment and your uncertainty as coordinator, Amit's conduct, and team dysfunction. Transparency might show maturity, but it could also establish a pattern of behavioral problems in week one. Should you name individuals or speak generally? Do you address Rahul's behavior despite having no authority and your own recent lapse? What do you say to Divya? How do you help Amit with attire without damaging a five-day-old friendship? How do you facilitate team resolution when members want different approaches? The dinner is in 32 hours. Priya may escalate today. Divya avoids you. The project is behind with six days left. Marcus's meeting is in 26 hours. Amit texted again: 'real friends don't try to change each other.' Each decision risks damaging barely-formed relationships or your non-existent reputation, yet inaction carries equal risks. Your next moves in 24-48 hours will set your trajectory for your entire career. What would you do?

Your Response

Prioritize the business case project by dividing responsibilities clearly among team members based on their strengths, setting interim deadlines to ensure completion. Address the interpersonal situations by having one-on-one conversations with each person involved—Divya to apologize, Priya and Karthik to understand their concerns, and Amit to discuss professional expectations. Document your observations and questions to discuss with Marcus during your scheduled meeting, seeking his advice on handling team coordination challenges.

Initial Response

I would take accountability, resolve issues privately and respectfully, promote professionalism, and refocus the team on project success

Task

Two weeks into your training program, your pod has been building a customer analytics dashboard using React and Python—technologies you've worked hard to learn through intensive study sessions. The team has just found its rhythm and created initial documentation, with everyone beginning to specialize in different components. This morning, Sana Khan announced that client priorities have shifted dramatically: the project must be rebuilt as a mobile-first application using React Native and Node.js—technologies none of your team has touched before. The reasoning is clear: the actual client engagement your team will support has pivoted to mobile solutions. However, the timeline remains unchanged, with the major milestone demonstration still scheduled for ten days from now, now being observed by both Marcus Chen and external stakeholders who will influence your project placements. Your team's reaction is tense and divided. Priya is visibly frustrated, having invested significant effort into the Python backend, and firmly believes the team should push back against 'throwing everything away.' Vikram seems anxious, admitting he's never done mobile development and doubts he can learn it under such pressure. Rahul is practical but worried about quality, and has just mentioned that another pod led by Ananya Patel specifically requested this technology stack from day one and is already ahead. During the heated team discussion, Priya proposes drafting a formal request to Sana Khan arguing for keeping the original stack, emphasizing the team's progress and the risk of starting over. Vikram supports this, saying he'd rather refine what exists than fail with something unfamiliar. Rahul remains silent, clearly conflicted. You recognize several competing pressures: embracing the change means starting from behind while Ananya's team has a significant advantage, creating real risk for the critical demonstration; yet resisting directly contradicts Sana Khan's repeated emphasis that consultants must be adaptable, and Marcus Chen specifically stated during onboarding that 'client needs evolve rapidly—our value is in our flexibility.' You also see a potential opportunity—if your team successfully pivots and demonstrates rapid learning, it could showcase stronger capabilities than merely completing the original plan, but only if everyone is aligned and energized rather than defeated. You've also learned that Ananya's team might share some foundational guidance, but approaching them could be seen by your teammates as conceding defeat or might create awkward obligations. Additionally, training resources for React Native are limited, and Sana Khan mentioned she's already receiving multiple requests for support on the new stack—teams who act quickly will have priority access to her guidance. There's another complication: you've just discovered that Priya has already begun drafting the pushback email to Sana Khan and plans to send it within the hour, listing all team members as co-signers, which could position your entire pod as inflexible before you've even attempted the pivot. The team is looking to you for immediate direction: do you support Priya's pushback and sign the email, potentially demonstrating conviction but risking being perceived as resistant to change? Do you advocate strongly for the pivot and try to reframe it as a learning showcase, possibly alienating frustrated teammates if the transition proves overwhelming? Do you suggest a compromise approach that attempts to partially salvage existing work while adapting, which might satisfy no one and muddy the project vision? How do you address your teammates' legitimate concerns about starting over while modeling the adaptability that's clearly valued by leadership? And how do you navigate the competitive pressure from Ananya's team while maintaining your pod's confidence? Sana Khan has scheduled a check-in meeting in three hours where each team must present their adaptation strategy, and Priya is waiting for your response on the email right now. What would you do?

Your Response

Intervene immediately to pause Priya's email, convene a 15-minute stand-up to openly surface concerns, then co-create a clear pivot roadmap that reuses transferable React logic, pairs teammates for rapid React Native and Node.js upskilling, secures an early coaching slot with Sana and Marcus, and drafts an updated adaptation plan to present confidently at the check-in.

Initial Response

I would support the pivot, discuss the team's concerns with Sana, reuse existing work where possible, and create a clear plan to help the team adapt and meet the deadline.
